No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 10, Application US/08096623A
Patent No. 5684238
GENERAL INFORMATION:
APPLICANT: Ausich, Rodney L.
APPLICANT: Brinkhaus; Friedhelm L.
APPLICANT: Witharji, Indrani
APPLICANT: Proffit, John H.
APPLICANT: Yarger, James G.
APPLICANT: Yes, Huei-che B.
TITLE OF INVENTION: Biosynthesis of Zeaxanthin and
TITLE OF INVENTION: Glycosylated Zeaxanthin in Genetically Engineered Hosts
NUMBER OF SEQUENCES: 104
CORRESPONDENCE ADDRESS:
ADDRESSES: Welsh & Katz, Ltd.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      516 Activation and analysis of cryptic ort genes for carotenoid
blosynthesis from Streptomyces griseus.";
Mol. Gen. Genet. 252:658-666(1996).
-!- FUNCTION: This enzyme converts phytoene into zeta-carotene via the
intermediary of phytofluene by the symmetrical introduction of two
double bonds at the C-11 and C-11' positions of phytoene.
-!- CORCTOR: FAD (Probable).
-!- PATHWAY: Carotenoid biosynthesis.
-!- SIMILARITY: Belongs to the phytoene dehydrogenase family.
                                                                                                                                                                                                                                                                                                            -------TDRTWPNLAHHTISFGAAWKSTFHELTRTGELMSDPSLLITRP

Volohing, sequence, and photoregulation of al-1, a carotenoid
biosynthetic gene of Neurospora crassa.";
Mol. Cell. Biol. 10:5064-5070(1990).
-!- FUNCTION: This enzyme converts phytoene into zeta-carotene via
intermediary of phytofluene by the symmetrical introduction of
double bonds at the C-11 and C-11' positions of phytoene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bukaryota, Fungi, Ascomycota; Pezizomycotina, Sordariomycetes;
